Short-term Preemption and ROFR Project Update

CBPI
June 15, 2022

Mike Steigerwald

Status of Preemption BP v4

- PCM has now been enabled for Monthly, Weekly, and Daily firm and non-firm service (including Redirects).

- This completes the implementation of Preemption BP v4.

- There has been no PCM activity yet. BPA continues to monitor this every day.

- 4 customer training sessions have been held. A video of the last session is available on the customer training page.

Status of Preemption BP v5

- Preemption BP v5 will incorporate PCM for Hourly firm and non-firm service, including Redirects.

- That version of the BP is being routed internally now. It will be posted for customer comment in July.

- One last bundle of OATI software will be needed.   Testing of that software will start later this month.

- PCM for Hourly service will be implemented in the Fall (late Sept at the earliest).

PCM OASIS Templates

- 3 new OASIS templates have been added.

- These can be used programmatically for the same functionality provided by the PCM screens on OASIS.
  - *preemption*: Used the same as Preemption Summary and Preemption Detail screens.   Provides the status of all participants for a given preemption process. Email notifications are also provided in the format of this template.
  - *rofrstatus*: Provides the status of a given ROFR request similar to the ROFR Summary screen.
  - *rofrrequest*: Used to create and submit a ROFR request to exercise ROFR.

- Let us know if anyone wants training on the use of these templates.
